Contents

Introduction **7**

1 Descriptive Statistics **9**

1.1 Frequency Tables 9

1.1.1 Frequencies 10

1.1.2 Data sorting in a table 10

1.2 Statistical Parameters 11

1.2.1 Measures of central tendency and position 11

1.2.2 Dispersion parameters 13

1.2.3 Shape parameters 14

1.3 Graphical Representations 15

1.3.1 Bar Chart 15

1.3.2 Histogram 16

1.3.3 Stem-and-leaf plot 17

1.3.4 Box-Plot Diagram 19

1.4 Excercises 19

2 Parameter Estimation **43**

2.1 Point Estimation 43

2.1.1 Method of Moments 44

2.1.2 Maximum likelihood method 45

2.2 Interval Estimation 46

2.2.1 Estimation for the mean when the variance is known . . 46

2.2.2 Estimation for the mean when the variance is unknown 47
2.2.3 Estimation for the difference of means 48
2.2.4 Estimation of Proportion 50
2.2.5 Estimation of the variance 50
2.3 Excercises 52

3 Hypothesis Testing **71**
3.0.1 Types of error and level of significance 72
3.0.2 Critical value and power of a hypothesis test 74
3.1 Parametric Hypothesis Testing 75
3.1.1 Hypothesis Test for the Mean When Variance is Known 75
3.1.2 Hypothesis test for the mean when the variance is unknown 77
3.1.3 Hypothesis test for the means of two independent populations 77
3.1.4 Test for proportions 80
3.1.5 Paired samples t-test 82
3.1.6 Contrast for variances 83
3.2 Nonparametric Hypothesis Test 84
3.2.1 Test for Goodness of Fit 85
3.2.2 Homogeneity test of samples 87
3.3 Excercises 89

4 Analysis of Variance **105**
4.1 One-Way ANOVA 105
4.1.1 Decomposition of total variability 107
4.2 Exercises 108

5 Probability distribution tables **113**

5.1 Standard Normal distribution 113
5.2 t-Student distribution 114
5.3 Chi-square distribution 115
5.4 F-Snedecor distribution 116
